Art Unit: 2882

Claims 2, 8, 9, 13, 14, 15 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 2, 8, 9, 14 and 15 improperly describe how the device may be operated rather than setting forth structural limitations as required. The structural limitations conveyed by "peak hold processing portion" in claims 6, 7, 13 and 18 are unclear,

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Yedid (4613983). Yedid teaches x-ray imaging comprising x-ray source 13, x-ray detector 14/15, source/detector support and moving means 12, patient table 11, position sensor 18, image memories 30 and 31, controller 20/21/23, monitor 16 and data processor 20 which adds and joins together separate small images of the blood system spaced along a patient to form a composite image wider than the field of view of the detector assembly (lines 33 et seq of column 3). The processor may also generate subtraction images (lines 1 et seq of column 5).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
